                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel human AFP proteins (not defined) and CC the nucleic acids that encode them. AFP proteins are useful as standards CC in assays of protein and protein inhibitors in both cilinical and research CC settings, as protein and amino acid supplements, including hydrolysates. CT fine nucleic acids are useful for radiation hybrid mapping. Secretory CC fusion proteins of AFP are useful in cancer therapy, for enhancing in CC vitro cytotoxicity, for enhancing in vivo killing of target tissues, and CC for targeted cells or tissue inhibition or ablation. Anti-AFP antibodies are useful for resoluting target polypeptides by affinity purification, in CC diagnostic assays for determining circulating or localised levels of CC target polypeptides, for tissue typing, for cell sorting, for screening CC expression libraries, for generating anti-idiotypic antibodies, and as neutralising antibodies or as antagonists to block protein activity in CC vitro and in vivo. AFP proteins and nucleic acids may be used to CC diagnose or treat (e.g. by gene therapy) diseases associated with the CC AFP576853/AFP39158 and thrombocytopaenia, leukaemia, porphyria, Gilles De CC AFP576853/AFP39158 and thrombocytopaenia, cell carcinoma, diabetes mailitus, Grave's disease, AFP666311 and colon cancer, AFP253034 and CC Alzheimer's disease and AFP68650 and epiphyseal dysplasia. Many more CC examples of disease are given in the specification. The present ax and AFP of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin, Inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                            Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAA38642-AAI42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-prager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The TATA-binding protein associated factor dTAFII60 (including specific antibodies and fusion products) are used in drug screening diagnostics and therapeutics. They are used in the development of specific biochemical assays for screening compounds that agonise or antagonise selected transcription factors involved in regulating gene expression associated with human pathology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Comai L,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     is a component of the TFIID fraction required for reconstituting RNA polymerase II in vitro transcription activity. The encoded protein has an estimated moi. wt. of 60 kD by SDS-PAGE. The invention relates to purified proteins involved in transcription by RNA polymerase II, the RNA polymerase which transcribes messenger RNA. RNA polymerase II transcription proceeds in vitro upon addition of several nuclear fractions designated TFIIA, B, D, E, F, H, I and J to RNA polymerase II holeenzyme. Fraction TFIID has been shown to contains a TBP and other TAFS. Purification of TFIID and separation of its components reveals 7 proteins ranging in size from 30-250 kD. Serum raised against the TFIID fraction allowed cloning of the corresp. genes from lambda-gtil expression libraries.
AAW25026 represents TATA-binding protein associated factor (TAF) polypeptide, dTAF1160 (mol. weight 60kD). TAF peptides derived from dTAF1130 alpha, dTAF1130 beta, dTAF1160, dTAF1160, dTAF1180, dTAF11110, dTAF1150, and dTAF11250, their human equivalents and nucleic acids encoding them, are used to modulate transcription, including transcription initiation. TAFS are nuclear proteins inv
                                                                                                                                                                                                                                    Tjian
                                                                                                      Example 1; Column 57-60;
                                                                                                                                Nucleic acids encoding human TATA-binding protein associated factor (TAF) peptide(s) - for production of recombinant peptide(s), used for modulating transcription of TAFs

The inventuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                         (ABB57737-ABB72072)

                                                                                                                                                                                                The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proteins or which may induce production of other cytokines in other cell differentiation or which may induce polynucleotides and polypeptides are useful in gene therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hematopoiesis regulating activity, tissue growth factor activity, hematopoiesis regulating activity, tissue growth factor activity, hematopoiesis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammatics.

They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can also be used for detection of members of the Borrelia genus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated Borrelia burgdorferi nucleic acids - used to develop products for the diagnosis, prevention and treatment of diseases caused by Borrelia, particularly Lyme disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          W09859071-A1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polynucleotides derived from Coryneform bacteria, for identif mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        07-APR-2000; 2000JP-0159162.

```
stimulation of the receptor. Such compounds can be used to treat or prevent disorders or diseases pertaining to the heart, blood vessels or the renal system (e.g. vasospasm, heart failure, shock, cardiac hypertrophy, increased blood pressure, angina, myocardial infarction, sudden cardiac death, arrythmia, peripheral vascular disease and abnormal renal conditions such as impaired flow of fluid, abnormal mass transport or renal failure), conditions related to increased sympathetic nerve activity (e.g. during or after coronary artery surgery and operations and surgery in the gastrointestinal tract), cerebral diseases and diseases related to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequences (see AAV05530-31), expression vectors, host cells (especially Escherichia coli or mammalian cells), and methods for evaluating the effectiveness of test compounds for the treatment or prevention of conditions associated with an excess or deficiency of stimulation of the receptor. Such compounds can be used to treat out the stimulation of the receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pain; renal failure; neurodegeneration; metabolic disorder; obesity; inflammation; asthma; vasospasm; heart failure; shock; cardiac hypertrophy; hypertension; myocardial infarction; arrythmia; epilepsy; cerebral infarction; stroke; haemorrhage; cerebral vasospasm; depression; anxiety; schizophrenia; dementia;

Y2 receptors are found in a variety of brain regions as well as in the peripheral nervous system. In all tissues, Y2 receptors mediate a decrease in the release of neurotransmitters. Also claimed are cDNA and RNA

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score

Sequence 3, Application US/08868458
PATENT NO. 6150512

GENERAL INFORMATION:
APPLICANT: Yuan, L.
APPLICANT: Engineering Plant Thioesterases And
TITLE OF INVENTION: Engineering Plant Thioesterases And
Bisclosure of Plant Thioesterases
Having No. 6150512e1 Substrate Specificity
NUMBER OF SEQUENCES: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 3, Application US/08440845D Patent No. 5955329
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                           Score

A;Title: Genome sequence of the radioresistant bacterium Deinococcus radiodurans R1.
A:Reference number: A75250; MUID:20036896
A:Accession: G75578
A:Status: preliminary
A:Status: preliminary
A:Status: preliminary
A:Molecule type: DNA
A:Residues: 1-785 <WHI>
A:Cross-references: GB:AE001863; GB:AE001825; NID:g6460670; PIDN:AAF12385.1; PID:g646068
A:Experimental source: strain R1
C:Genetics:
A:Gene: DRA0255
A:Map position: 2
conserved oppothetical protein yknA - Bacillus subtilis
C;Species: Bacillus subtilis
